

Phase 0E: Signed Complexity Distances

| EXPERIMENT COMPARISON      |                                           |
|----------------------------|-------------------------------------------|
| Exp 0B (MI → MDS):         | 2D: (+,+)    3D: (+,+,+)                  |
| Exp 0D ( ΔC  → MDS):       | 2D: (+,+)    3D: (+,+,+)                  |
| Exp 0E (signed ΔC → Gram): | 2D: (0,0)<br>3D: (0,0,0)<br>4D: (0,0,0,0) |
| ☐ Still Euclidean          |                                           |

| RESULTS SUMMARY               |                                                         |
|-------------------------------|---------------------------------------------------------|
| 2D:                           | (0,0)<br>λ <sub>min</sub> = 0.00e+00<br>Negative: 0     |
| 3D:                           | (0,0,0)<br>λ <sub>min</sub> = 0.00e+00<br>Negative: 0   |
| 4D:                           | (0,0,0,0)<br>λ <sub>min</sub> = 0.00e+00<br>Negative: 0 |
| ☐ NEGATIVE<br>Still Euclidean |                                                         |

| METHOD                                    |                                                            |
|-------------------------------------------|------------------------------------------------------------|
| Previous (FAILED):                        | d =  ΔC  → MDS<br>→ Always (+,+,+)                         |
| This work (NEW):                          | d = ΔC (signed!)<br>→ Gram matrix<br>→ Preserves negatives |
| Key: SIGN matters!<br>Negative = timelike |                                                            |
